## ANTIQUÉ BRONZE

Antique Bronze sinks have a “living finish” that will continue to age and change with time. The metal is left unsealed without a clear top coat to prevent corrosion.

Without a clear topcoat, these sinks will continue to age and their colors will continue to evolve as the base metal reacts with the environment.

No two sinks will age at the same rate or go through the same color phases.

Their continued evolution is completely dependent on the environment in which they are placed.

Antique Bronze sinks are sealed with a coat of paste wax. The wax that is applied to the sink will wear off over time and a new coat of paste wax should be applied periodically.

Gentle soap and water will maintain the sink.

No abrasives or harsh chemicals should be used. Avoid the use of antibacterial soap, as it also has the tendency to harm the patina finish.

## UNLACQUERED BRASS

Unlacquered Brass sinks have a “living finish” that will continue to age and change with time. The metal is left unsealed without a clear top coat to prevent corrosion. Without a clear topcoat, these sinks will continue to age and their colors will continue to evolve as the base metal reacts with the environment.

No two sinks will age at the same rate or go through the same color phases. Their continued evolution is completely dependent on the environment in which they are placed.

Unlacquered Brass sinks are sealed with a coat of paste wax. The wax that is applied to the sink will wear off over time and a new coat of paste wax should be applied periodically.

Gentle soap and water will maintain the sink. For hard to clean stains, a brass cleaner may be suitable.

No abrasives or harsh chemicals should be used. Avoid the use of antibacterial soap, as it also has the tendency to harm the patina finish.

## COPPER

Copper sinks have a “living finish” that will continue to age and change with time. The metal is left unsealed without a clear top coat to prevent corrosion. Without a clear topcoat, these sinks will continue to age and their colors will continue to evolve as the base metal reacts with the environment.

No two sinks will age at the same rate or go through the same color phases. Their continued evolution is completely dependent on the environment in which they are placed.

A heat-set patina process is used to produce the Weathered Copper and Dark Bronze finish. During this process the sinks are sealed with a coat of dark paste wax.

The wax that is applied to the sink will wear off over time and a new coat of paste wax should be applied periodically.

Gentle soap and water will maintain the sink.

No abrasives or harsh chemicals should be used. Avoid the use of antibacterial soap, as it also has the tendency to harm the patina finish.

## STAINLESS STEEL

Mild soap and water will maintain the sink.  
A stainless steel cleaner/polish may be used  
for more thorough cleaning.

Do not use abrasive cleaning cloths and pads.  
Always clean with the brush pattern of the sink.

Stainless steel sinks will scratch from everyday use.  
However, these scratches will blend  
over time to create a unique finish.
